

Pavo Podo Start

Small pellets for young foals

Pavo Podo®Start (5mm pellet) is not only rich in high-quality proteins (essential amino acids) but provides all the vitamins and minerals that your young foal needs. It forms a good basis for the transition from mare's milk to solid food. Extra magnesium supports rapid bone growth during the growth spurt and easily digestible copper, zinc and manganese ensure uninterrupted bone growth. For steady growth of the young foal from 3 weeks to 8 months.

Important characteristics

- 5 mm pellet, easily digestible by young foals
- All the important vitamins for an even, balanced growth
- High quality proteins and amino-acids
- Rich in magnesium for healthy bone growth
- Contains easily digestible copper, zinc and manganese for uninterrupted bone growth

Application

Pavo Podo®Start is Step 2 in supporting a foal towards a healthy, adult life.
Give your foals Pavo Podo®Grow, from 8 months old, Step 3 in the Pavo breeding range.

Contains

- Toasted soy seans
